

LU0992624949

Monthly Factsheet - 30/04/2025

INVESTMENT OBJECTIVE

Fund invested in bonds and other debt securities denominated in Euro. Its active, flexible low duration strategy enables the Fund to implement conviction-driven strategies mainly on European markets with no bias to any benchmark. In addition, the Fund seeks to invest sustainably for long-term growth and implements a socially responsible investment approach. It seeks to outperform its reference indicator, the ICE BofA ML 1-3 Y Euro All Government Index (EUR), over a 2-year investment horizon.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- April was marked by high volatility and renewed risk aversion on the bond and equity markets. The Trump administration's announcement of new tariffs reignited fears of a recession in the US and disruptions to global production chains.
- Despite Donald Trump's backtracking on the main tariff measures (temporarily reduced to 10%, except for China), a crisis of confidence took hold among investors, who deserted US assets (the dollar and Treasury bonds).
- In the US, the yield curve steepened, with the 2-year rate falling by -28 basis points compared with -5 basis points for the 10-year rate, as the market now anticipates four rate cuts by the Federal Reserve between now and the end of the year.
- The picture was the same in the eurozone, where the German 2-year rate fell by -36 basis points compared with -29 basis points for the 10-year rate, completely erasing the previous month's correction linked to the announcement of investment plans in Germany.
- Risk aversion was high in April following the introduction of tariffs, which led to a +100 bp widening on the Itraxx Xover index at the beginning of the month, before tightening just as sharply after the Trump administration's reversal. As a result, the Itraxx Xover index recorded only a moderate widening of +22bp over the month.

PERFORMANCE COMMENTARY

- In a highly volatile environment, the fund delivered a positive absolute performance, slightly down compared to its benchmark.
- On the sovereign bonds bucket, our long positions on European rates had an overall positive impact as rates eased. However, our short positions on French rates contributed negatively to the fund's performance.
- In credit, our hedges partially offset the widening of risk premiums. We partially took profits on these after the volatility shock at the beginning of the month before rebuilding this protection at the end of the month as credit spreads narrowed.
- Finally, the portfolio benefited from our broad exposure to money market instruments, while our selection of collateralized loan obligations (CLOs) had a neutral impact this month.

OUTLOOK AND INVESTMENT STRATEGY

- We adopted a dynamic stance on modified duration management in April, shifting it from 1.7 to 2.0 at the beginning of the month at the height of the volatility shock, before returning to 1.8 following the sharp decline in European rates.
- The combination of attractive carry offered by our corporate bonds and the credit protection we had built in beforehand provided a real buffer in this environment of widening risk premiums, enabling our credit portfolio to contribute positively in April.
- We continue to see attractive potential in credit assets. We are also maintaining protection on the credit market (iTraxx Xover), as markets are trading at tight levels amid economic and geopolitical uncertainty.
- On the other hand, we are taking a cautious stance on rates, particularly in Europe, where we favor a yield curve steepening strategy amid fiscal expansion in Europe.
- Finally, we are maintaining a significant allocation to money market instruments, which are an attractive source of carry with limited risk.

PORTFOLIO ESG SUMMARY

This financial product is classified Article 8 of the Sustainable Finance Disclosure Regulation (“SFDR”). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Sub-Fund’s net assets are invested in green, social, sustainability or sustainability-linked corporate or sovereign bonds as well as corporate issuers positively aligned with one of 9 out of 17 United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 3% of the Sub-Fund’s net assets;
- Investment universe is actively reduced for corporate bonds by at least 20%;
- ESG analysis applied to at least 90% of issuers.

SUSTAINABLE INVESTMENTS (NET ASSETS)

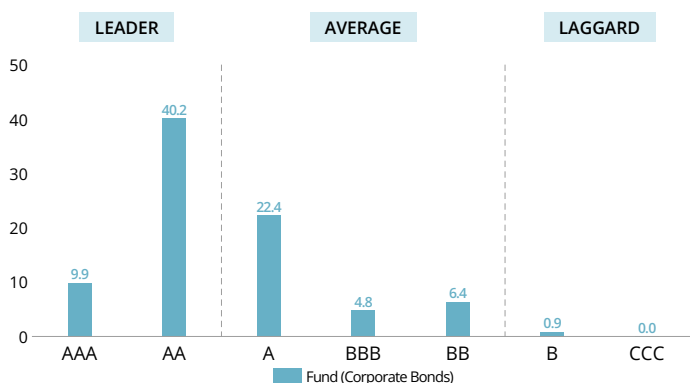

For the assessment of the **Green, Social, Sustainable and Sustainability-Linked-Bonds**, the Bloomberg sustainable debt indicators are used for screening of company debt securities which have self-reported sustainability features. Considerations such as whether the instrument is classified under recognised market standards (International Capital Markets Association or Climate Bond Initiative) or have third party assurance are important to our assessment.

United Nations Sustainable Development Goals (SDGs) alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company’s policies, practices and targets addressing such SDGs.

GLOSSARY

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund “cushions” the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund “magnifies” the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, “Article 8” funds promote environmental and social characteristics, “Article 9” funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, “Article 6” funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see “MSCI ESG Fund Ratings Methodology”, Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

MAIN RISKS OF THE FUND

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **RISK OF CAPITAL LOSS:** The portfolio does not guarantee or protect the capital invested. Capital loss occurs when a unit is sold at a lower price than that paid at the time of purchase. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments.

The Fund presents a risk of loss of capital.
