

CARMIGNAC PORTFOLIO EMERGING PATRIMOINE A EUR ACC

LUXEMBOURG SICAV SUB-FUND

Recommended
minimum investment
horizon:

5 YEARS

LU0592698954

Monthly Factsheet - 28/03/2024

INVESTMENT OBJECTIVE

Flexible multi-asset emerging market fund combining three performance drivers: emerging equities, bonds and currencies. With the ability to adjust the net equity exposure up to 50% and the modified duration [-4 ; +10], the Fund seeks to benefit from market upturns while limiting drawdowns. The fund adopts a sustainable, responsible approach, favouring countries and companies that deliver solutions to environmental and social challenges, consistently taking into account ESG criteria. The Fund aims to outperform its reference indicator over a recommended investment horizon of 5 years.

Fund Management analysis can be found on P.4

PORTFOLIO ESG SUMMARY

This financial product is classified as an Article 8 fund under the EU's Sustainable Financial Disclosures Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Sub-Fund's net assets are invested in sustainable investments aligned positively with the United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 3% of the Sub-Fund's net assets;
- The equity and corporate bond investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers.

ALIGNMENT WITH THE UN SUSTAINABLE DEVELOPMENT GOALS (NET ASSETS)

United Nations Sustainable Development Goals (SDGs)

SDG alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company's policies, practices and targets addressing such SDGs.

To find out more about the United Nations Sustainable Development Goals, please visit <https://sdgs.un.org/goals>.

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

Emerging equity markets were up in March, as were global markets as a whole. However, Chinese markets were stable. Early in the month, the government announced it would be targeting 5% growth over the year and trying to cap the deficit at 3% of GDP, but its optimism failed to convince investors. China continues to face structural problems despite a slight improvement in certain economic indicators. For example, the NBS manufacturing PMI rose, and inflation of +0.7% put an end to five months of deflation. At a bond level, there were a large number of central bank meetings in the emerging world. Most of these central banks adopted a slightly more hawkish tone. Although they cut interest rates further in Latin America, they are expected to scale back their easing or take a break in the coming months. Although the local debt index (in euro) was flat in March, emerging market debt denominated in hard currencies continued to perform well, largely because spreads narrowed by 24 basis points.

PERFORMANCE COMMENTARY

The Fund delivered a positive return, beating its reference indicator. We benefited from our exposure to the artificial intelligence theme through Taiwan Semiconductor and Samsung Electronics. Our selection of Chinese stocks, including JD.com, MINISO and Anta Sports, was also profitable. However, our Brazilian holdings (Eletrobras) were somewhat disappointing. At a fixed income level, our selection of emerging market debt denominated in hard currencies continued to generate a positive return. The main sources of performance in this segment were Argentina, Ecuador and Romania. The contribution from emerging market debt denominated in local currency was smaller, with Mexico and Poland the pick of the bunch. In contrast, our long positioning on Hungarian bonds weighed on performance, as did our currency strategies, especially those involving exposure to the Mexican peso and Japanese yen.

OUTLOOK AND INVESTMENT STRATEGY

We remain optimistic for emerging market assets in 2024. The vast emerging world presents numerous opportunities across all regions and asset classes. The latest macroeconomic indicators suggest that manufacturing activity has bottomed out in the United States, the Eurozone and China. This is a big support factor for commodity-producing countries, especially in Latin America. We also take a positive view of Asian economies, particularly South Korea and Taiwan, which should benefit from the new AI cycle. At a fixed income level, we remain long on emerging market debt denominated in hard currencies, but have been taking profits on our best performing positions since the beginning of the year. We have reduced our Eastern European positions, especially those on Hungarian bonds, as the market has already priced in a number of future rate cuts. In terms of local debt, we particularly like Mexico where we are anticipating further rate cuts from the central bank, and Brazil as the market's terminal rate for the country still looks too high. We are keeping modified duration close to 240 basis points and continuing to protect the portfolio with index hedges. We are leaving equity exposure at around 22%, with significant exposure to Asian markets and, in particular, Korean and Taiwanese technology stocks as the artificial intelligence theme is leading to sustained growth in demand for semiconductors and electronic components. We took advantage of the Chinese share rally to reduce our exposure to China, and increased our exposure to the Indian market by opening a position on property company Macrotech Developers. Although we still have high exposure to the euro (the Fund's base currency), we increased exposure to the currencies of commodity producing countries, including the Brazilian real and Chilean peso, and certain Asian currencies such as the Korean won.

GLOSSARY

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity corresponds to the concept of actuarial yield. It is, at the time of calculation, the estimated rate of return offered by a bond in the event it is held until maturity by the investor. Note that the yield shown does not take into account the FX carry and fees and expenses of the Fund.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2021. <https://www.msci.com/documents/1296102/15388113/MSCI+ESG+Fund+Ratings+Exec+Summary+Methodology.pdf/ec622acc-42a7-158f-6a47-ed7aa4503d4f?t=1562690846881>.

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

SFDR Articles - Fund Classification: Sustainable Finance Disclosure Regulation, an EU Act that requires asset managers to classify funds into categories: "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default.

EMERGING MARKETS: Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest.

The Fund presents a risk of loss of capital.
